

Supply in the paddock = 560,000 Animal Days (AD's) of feed
Demand of 4,000 animals for 210 days = 840,000 AD's
Shortfall of forage is 280,000 AD's

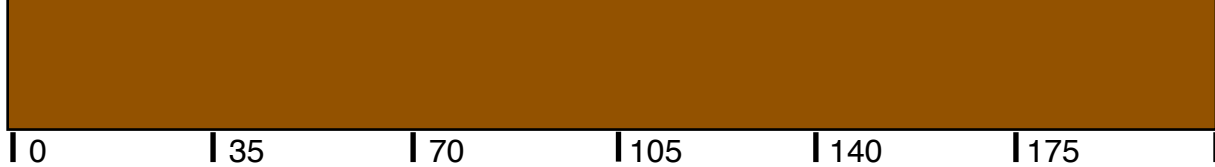

Day 1: Sell or otherwise remove 1,333 animals allows 2,667 animals to be carried through to the worst case (in this case 210 days) endpoint

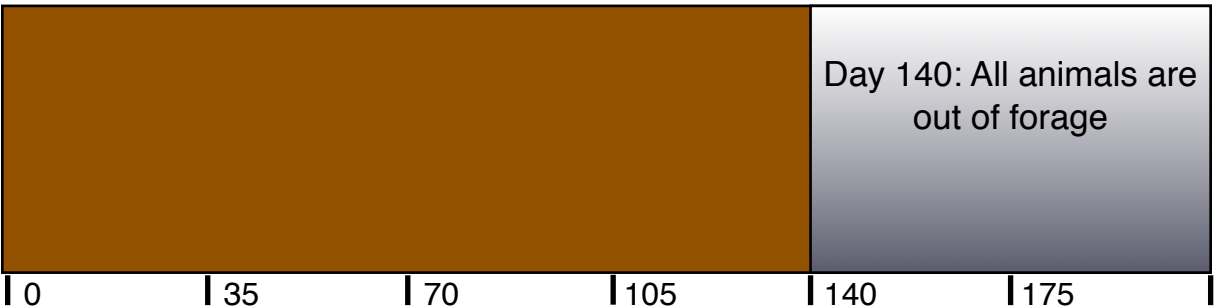

Day 35: Sell or otherwise remove 1,600 animals allows 2,400 to carry through to the 210 day endpoint

Day 70: Sell or otherwise remove 2,000 animals (half the herd or flock) to carry 2,000 through to the 210 day endpoint

Day 140: All animals are out of forage

If you need to destock because of a poor growing season, the sooner you take positive action the less animals you will need to remove.

Take no action and you commit to feeding, or stock deaths!
